Design game reflection

The action of my game is to guide a turtle which is imagined as a chicken to wherever you want. A challenge we faced is that we had problems with merging two codes together so we had to troubleshoot. We worked well on creating the game idea. We made changes to the turtle and made it change colour. Communication skills were used as we communicated with each other to troubleshoot the code. I learned how to create a repository and upload my code in github. We could improve the solution by learning more to troubleshoot better.
